

# **Building Your Magnetic Field Mapper with LEGO®**

**Philip Keller  
Magnetics 2018**

**METROLab**  
*Magnetic precision has a name*

# Hall field mappers: (from Magnetics 2007 presentation)

- Need:
  - 3-Axis Hall sensor or array
  - Positioning jig
  - Temperature control
  - Calibration
- Get:
  - 3 components of **B**
  - Point-sampled
  - Low to medium precision

# Hall field mappers today: Turn-key solutions

**Senis MMS-1A-RS**

([www.senis.ch](http://www.senis.ch))

**Magcam Combi Scanner**

# Oldest turn-key field mapping system: Metrolab NMR Magnetic Field Camera

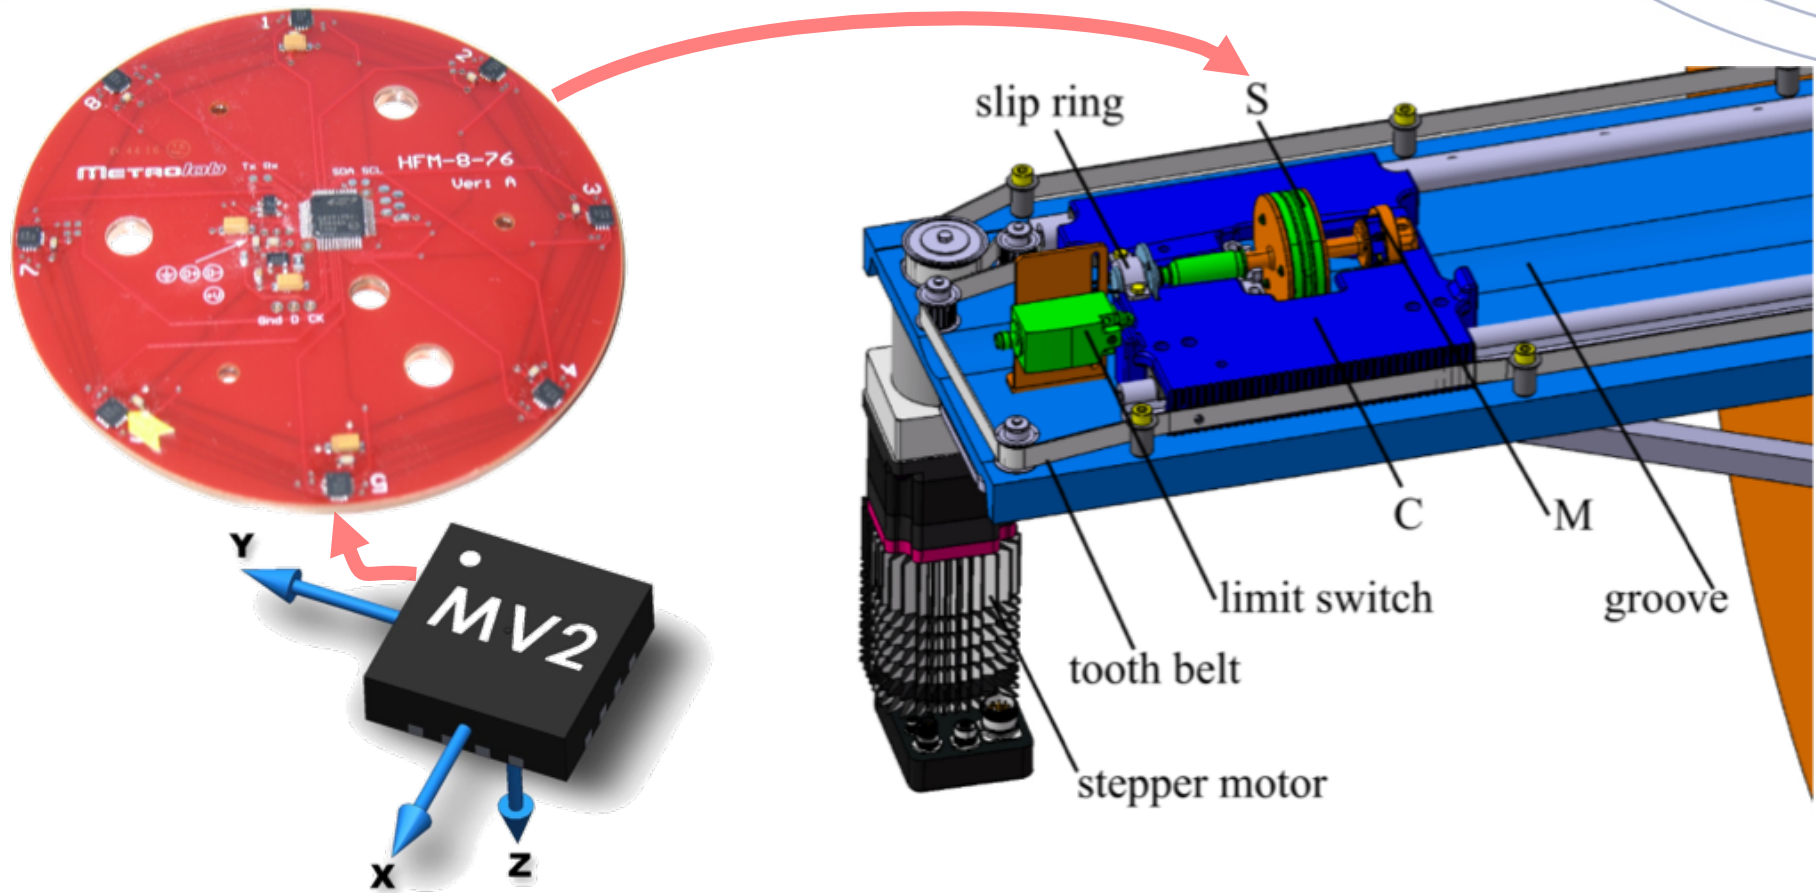

1992

Today

# Another example: Metrolab Hall Magnetic Camera (Magnetics 2017 presentation)

Sensor disc – Metrolab

Field mapper – FZ Jülich

# Barriers to entry

- Cost (~ 50 - 100 k\$)
- Up-front choices:  
(c.f. Magnetics 2007)
  - Use: R&D, production, field service?
  - Measurement: field components, total field, integral, gradient?
  - Field: strength, uniformity, AC/DC, stability?
- Precision: 10% or 10 ppm?
- Environment: vacuum, cryogenic?
- Positioning: access, range, precision, reproducibility?
- Speed: cost, external error sources, human error?
- ...

# Goal: reduce barriers to entry

- Iterative design:
  - Start small
  - Explore
  - Test
  - Validate
  - Demonstrate
  - Grow
- Low cost of entry

# Concept: modular field mapper

- Magnetic field measurement: network of small, independent, flexible, low-cost sensor modules
- Mechanical positioning: easily reconfigurable, expandable, little mechanical expertise

# Realization: MV2Lego™

## Bricks

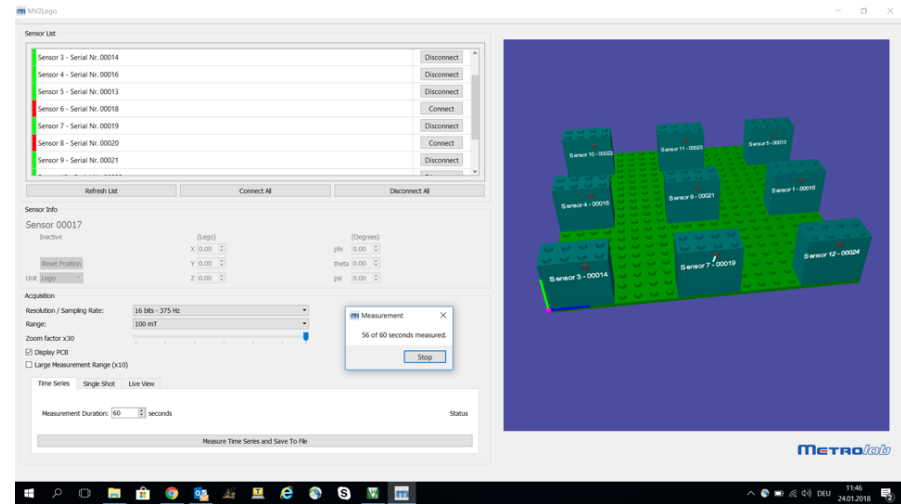

(standard 2x4 studs top/bottom,  
3 lateral holes for Technics axles)

## “Super-Hub”

(synchronization,  
non-magnetic connectors)

# MV2Lego™: Demo

(Lego) (Degrees)

X	0.00	phi	0.00
Y	0.00	theta	0.00
Z	0.00	psi	0.00

Reset Position

Unit: Lego

Acquisition

Resolution / Sampling Rate: 16 bits - 375 Hz

Range: 100 mT

Zoom factor x30

Display PCB

Large Measurement Range (x10)

Time Series Single Shot Live View

Measurement Duration: 120 seconds Status

Measure Time Series and Save To File

# Why LEGO?

- Modularity
- Variety of elements (including Technic and Mindstorms)
- Availability
- Familiarity
- Cost
- Mechanical precision

# LEGO gallery

Technic

Mindstorms

A devotee  
and his  
project

<https://www.youtube.com/watch?v=gsPTgKrJX8A>

# My personal favorite: World-champion Rubik's Cube Solver

## Why not wireless?

- Complexity, size, cost: antenna, comm. chip, battery, charging system, firmware, more powerful  $\mu$ -processor, ...
- RF interference (e.g. MRI scanners)
- Ferromagnetic material in components

# MV2Lego™: key figures

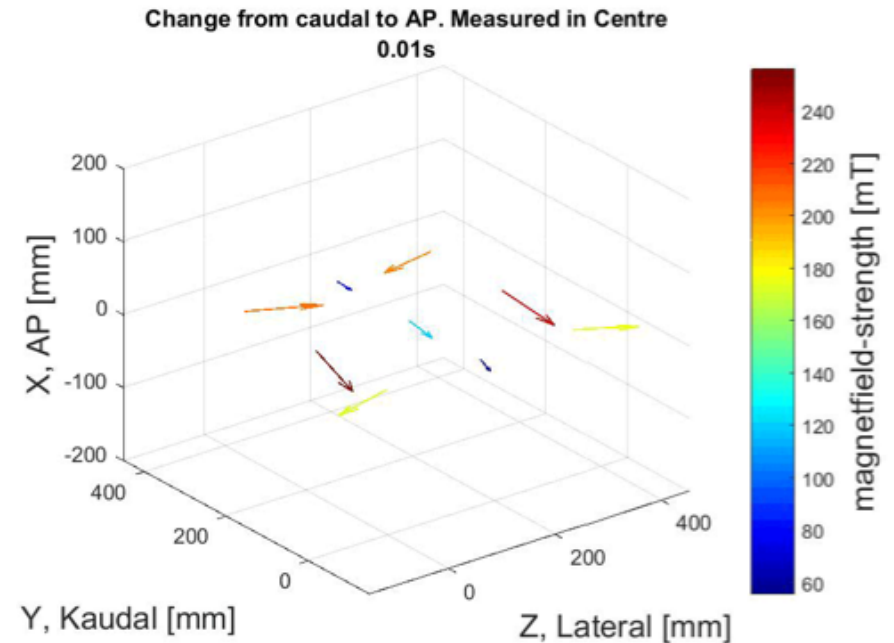

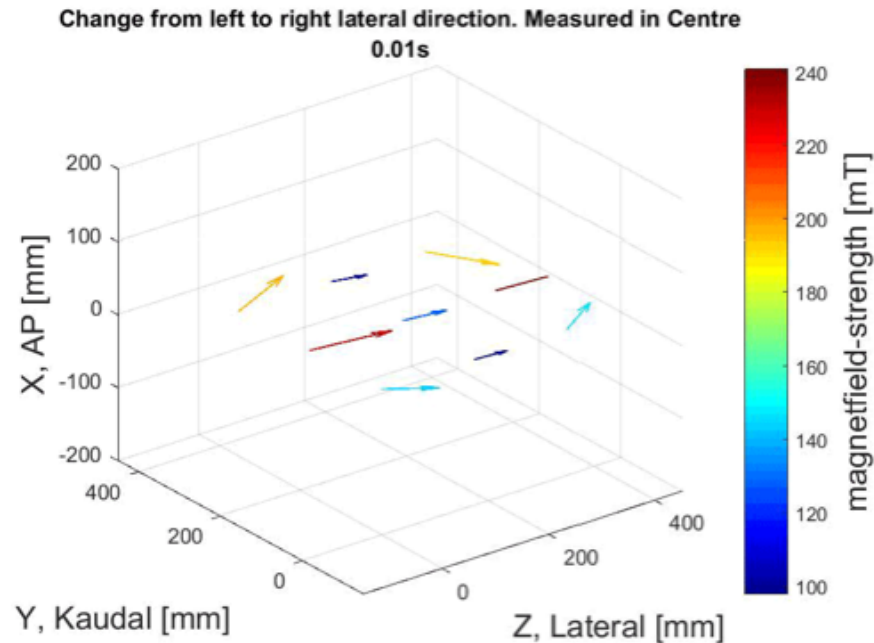

- Magnetometry:
  - **Calibrated**
  - Measurement ranges: 0.1, 0.3, 1, 3, 10, 30 T
  - Resolution: 14, 15, 16, 16+ bits
  - Sample rate:  $\leq 3$  kHz
  - Active volume: 200x200x10  $\mu\text{m}$
  - Triggered acquisition
- Modularity:
  - Magnetometry:
    - Up to 12 modules
    - Synchronized trigger
  - Mechanical:
    - Equivalent to 3 2x4 bricks
    - 3 Technic axle holes
- Size:
  - 32 x 16 x 29 mm
- Cost:
  - ??? ~ 5 k\$ per unit
- Schedule:
  - ??? End of 2018

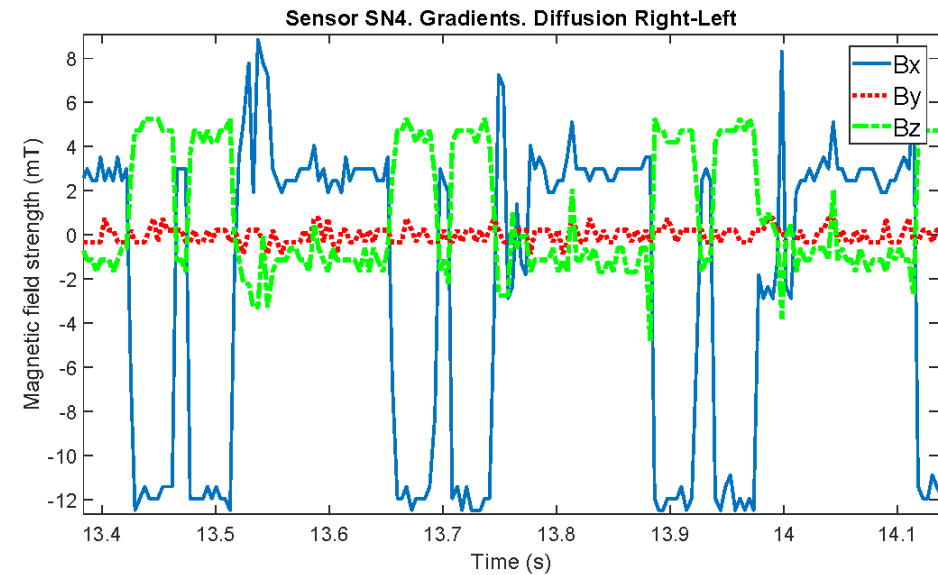

# Early results: mapping of remote magnetic navigation system

# Early results: mapping of remote magnetic navigation system

# Early results: Same sensors reconfigured to measure MRI gradients

J. Pascal, N. Weber, J. Felblinger, J. Oster, "Magnetic gradient mapping of a 3T MRI scanner using a modular array of novel three-axis Hall sensors" (paper submitted to ISMRM 2018)

# Conclusions

- Flexible, expandable magnetic field mapping system
- DC as well as AC fields
- Not a universal solution: constraints of mechanics, magnetometers
- Can be used with non-LEGO positioning systems
- Low cost of entry
- Cost of maximal system similar to existing mapping systems
