

End of Life Notification

PT2025: End of an Era

After more than 30 years, the NMR Precision Teslameter PT2025 has reached the end of its commercial life. It is succeeded by Metrolab's new-generation NMR Precision Teslameter PT2026, providing a 10x improvement for almost every performance parameter, at a comparable price.

Metrolab will stop sales of the PT2025 when the current stock is exhausted, which corresponds to roughly six months of normal sales. We will also stop the sales of the rack-mount version, PT4025, as well as the following accessories: probe models 1060 and 1080, amplifier 1030, regulator RG2040, the high-stability option HS2060, the GPIB option, the cable 1010, the cable 1012, the cable 1015 and the multiplexer models 2031 and 2032.

The probe models 1062 and 1082, the multiplexer model 2030, the cable 1011 and the 1062 extension cable will continue to be available until further notice.

We will continue to service the PT2025 and the discontinued accessories for 2 years after the last delivery. Service after this date will be provided on a "best effort" basis: we trust that our equipment will continue to operate for many more years, and we want to support our customers as long as we have the necessary components, tooling, and know-how.

Please feel free to contact us at contacts@metrolab.com, or +41 22 884 3311, if you have any questions about how this announcement affects you.
